- Draw fundamental elements such as lines, polylines, arcs, circles, ellipses, tables, hatches, clouds
- Perform move, copy, rotate, mirror, pattern, scale, trim, chamfer, or split actions with modify tools
- Measure and annotate distances between objects with dimension tools
- Import, create, and manage layers, blocks, and external references, and output drawings to a plotter, printer, or file

Advanced 2D drafting and APIs for customization

- Speed up your production workflows by using APIs for automation and customization
- Save countless hours of design time by eliminating manual or tedious tasks with tools like Drawing Compare, Power Trim, Insert Centerlines, Pattern Along a Path, Curved Text, Batch Printing, and more
- Convert raster images like floor plans and logos to vectorized line entities in seconds with Image Tracer
- Easily insert standard hardware from a fully defined library of bolts, screws, nuts, washers, and pins, generate holes and callouts, create a bill of materials, add balloons, and more with the Toolbox
- Import or export various file types and formats including PDF, DGN, SVG, XLS, and DSHBM (HomeByMe)

Robust 3D design and powerful integrations

- Create anything from essential 3D shapes to sketch-based complex 3D solids, and generate 3D surfaces
